

I chose to analyze YouTube. I started by drawing a black border around the whole page to show the body container. Then, I identified the three biggest "Lego blocks" and marked them with red borders: the Header at the top, the Sidebar on the left, and the Main Body where the videos are. I noticed that YouTube doesn't have a Footer on the home page because the videos just keep loading as you scroll, so I didn't include one.

The Header and the Filter Bar (the tags like "Music" or "Gaming") are part of the Sticky Zone. This means they stay at the top of the screen even when you scroll down. Inside the Header, there are also smaller elements like the "Burger Menu" (the three lines), YouTube logo, the search bar, and the user profile icon. The Sidebar contains navigation links like Home and Subscriptions. Finally, the Main Body is divided into sections. These sections group different types of content, such as the Main Video Grid, the Shorts section, and sometimes Playlists. Each video in these grids is its own small block with a thumbnail and a title.
